Tick here if you would like to receive project updates

Do you think harnessing renewable energy is important in the effort to secure clean affordable energy sources and address climate change?

Yes No Unsure (please tick your answer)

Do you think that Eday should make the most of its substantial renewable energy resources?

Yes No Unsure (please tick your answer)

Do you have any comments or questions on the Neven Point Wind Farm proposal? (Points you might want to cover include your view of the positives and/or concerns you might have on any particular aspect of the project).

During construction the project will likely involve pier access improvements and some road improvements. GreenPower will also aim to employ local people and utilise local businesses as much as possible in these works. Is there anything else that you think the project could do, or contribute to during construction?

GreenPower will provide £5,000 or equivalent per MW of installed capacity to the community every year. If 30MW is built (6 turbines), that would be £150,000 per year.

How would you like to see this administered? For example, would you like to see the funds administered by an existing group e.g. The Eday Partnership, the Community Council or Orkney Islands Council?

What type of activity or need do you think would benefit most from this funding? Some suggestions we have received so far include, funds could be allocated to help reduce the cost of energy locally, increase energy efficiency in homes, support local business and farming enterprises, provide training and apprenticeships, improve transport connections, upgrade broadband or enhance other local services? Tell us what you think the priorities should be:

If the Neven Point Wind Farm goes ahead, do you think the community and/or individuals should be given the opportunity to own a stake in the project, in addition to the proposed community benefit fund?

Yes No Unsure (please tick your answer)

Please expand on your answer and detail any opportunities or concerns associated with the investment opportunity:

Can you let us know if you are aware of any local companies that could offer services/undertake work for this project? (This could range from catering and local accommodation providers to electricians, joiners, heavy plant operators and fencing contractors, etc). Please make suggestions in the box below and we will aim to include them in our procurement list of local businesses who may be able to assist in the construction and operation of the wind farm.
